The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.

Tests above are only to be performed with intended loads, i.e. either with LEDs (for APC series) or Resistances (for APV series) For guidance on how to perform these EMC tests, please refer to TDF (Technical Documentation File).
